

ATS-OPTIMIZED (CLEAN, SIMPLE LAYOUT)

Mohd Anas Ansari

AI/ML Developer

Data Scientist with expertise in AI and machine learning, specializing in voice AI and conversational agents. Proven track record in developing innovative solutions that enhance user interactions and automate processes. Committed to leveraging advanced technologies to drive impactful results in diverse applications.

EXPERIENCE

AI/ML Developer

Botgo Technology Pvt Ltd | August 2025 - Present

- Developed an AI-based ticketing chatbot leveraging RAG (Retrieval-Augmented Generation) that automatically creates support tickets when user queries fall outside the predefined SOP knowledge base, ensuring zero unresolved escalations.
- Built a dynamic SQL DB-connected conversational bot as part of Botgo's core product suite, enabling real-time natural language interactions over relational databases with fully configurable, client-specific schemas.
- Engineered a Voice Call AI Agent pipeline integrating ASR, LLM reasoning, and TTS for automated inbound/outbound call handling with context-aware responses.
- Developing a dynamic AI Avatar application supporting multiple enterprise use cases including KYC verification, hospital patient consent, and recruitment screening — with configurable personas and real-time lip-sync.

AI Freelancer – Voice AI Remote, India

Airtel (Freelance) | January 2025 - July 2025

- Designed and developed a Voice Call AI Agent for Airtel Xstream, enabling end-to-end automated voice conversations with users by integrating ASR (Automatic Speech Recognition), LLM-based intent resolution, and TTS (Text-to-Speech) synthesis into a real-time telephony pipeline.
- Implemented dynamic dialogue management and context retention across multi-turn voice interactions, allowing the agent to handle complex customer queries, reduce live agent load, and deliver consistent, low-latency responses at scale.

SKILLS

Python SQL Machine Learning
NLP Computer Vision
Reinforcement Learning Transformers
LLMs TensorFlow PyTorch
Scikit-Learn Stable Diffusion RAG
LangChain OpenCV Power BI
Tableau
Vector DB (Chroma DB, FAISS, Pinecone)
GANs VAEs WAV2LIP RVC
Voice AI AI Avatars
Voice Call AI Agents RAG Pipelines
Conversational AI ASR/TTS Integration
VS Code Py Charm AWS/Azure/GCP
Vector DB (Chroma DB FAISS Pinecone)
PyCharm AWS Azure GCP

EDUCATION

Master of Science in Data Science

Vellore Institute of Technology | Aug. 2021 – July 2023

Bachelor of Computer Applications (BCA)

Jamia Hamdard University | 2018 – 2021

● Data Scientist

Nu Minds AI | October 2024 - December 2024

- Developed conversational AI Agents using ODBC databases, enabling natural language queries and responses through SQLDatabase Toolkit and LangChain functions, with integrated data visualizations.
- Integrated Stable Diffusion for generating high-quality synthetic images based on text inputs, enabling enhanced visual content generation for various applications.

● Machine Learning Engineer

Jupiter AI Labs | June 2024 - October 2024

- Developed models for audio-to-text classification and voice sentiment analysis, enhancing speech recognition and emotional detection from voice inputs.
- Contributed to a US healthcare project using Large Language Models (LLMs) for data insertion, updates, and retrieval, improving data processing efficiency.

● Jr. AI Developer

Globtief Infotech Pvt Ltd | February 2023 - June 2024

- Developed an AI Agent for data conversation, visualization, prediction, and transformation using NLP and LLMs.
- Built AI-based product suggestion chatbots for Mcaffeine and Norfolk Wine & Spirits.

PROJECTS

Voice Cloning Project

Replicated voices via RVC framework using 5-second samples with HuBERT/FAISS embeddings. Automated preprocessing with Librosa and deployed on AWS Lambda; achieved 95% voice similarity with 2-second inference time.

3D Face Reconstruction

Generated 3D meshes from images using DECA with OpenCV/Dlib landmark detection and PyRender visualization. Achieved 60% faster processing on TPUs; built a Flask API for user image uploads.

Synthetic Lipsync

Synced lip movements to audio using Wav2Lip with OpenCV/FFmpeg preprocessing pipeline. Achieved 89% accuracy at 24 FPS real-time; enabled batch processing on AWS EC2.
